EXAMPLE DATA - NOT REAL SENSOR EVIDENCE

Your home report

Reading time (UTC): 2026-10-28T12:00:00.000Z

Device: EXAMPLE-DEVICE

Temperature: 20.1 °C

Humidity: 68% RH (original reading: 68.4% RH)

MODERATE RISK

Data integrity

Not checked - example data

Explanation (English)

This is example data for testing. The original humidity reading is 68.4%, which is in the project moderate warning band. Watch the trend; one reading does not confirm mould.

The draft letter starts on the next page.

EXAMPLE DATA - NOT REAL SENSOR EVIDENCE

Draft letter to your landlord

[Your name]
[Your address]

28 October 2026

Dear [landlord's name],

Humidity readings in [room] at [your address]

I would like to report [describe what you have noticed]. This sample report demonstrates how sensor readings can be included with a request for an inspection. Replace these example values with real evidence before using it.

The example sensor recorded 68.4% relative humidity at 20.1 °C on 28 October 2026 at 12:00 UTC. A single reading does not establish that mould is present.

Please arrange an inspection to identify the cause of the concern and discuss appropriate action.

Kind regards,
[Your name]

Before sharing

Review this draft and replace any placeholders with accurate details. A single humidity reading does not confirm mould or replace a property inspection. The report is not an official HHSRS assessment. Nothing is sent to your landlord automatically.
